

GREENING THE WHARF

2007 – 2012 Cumulative Results

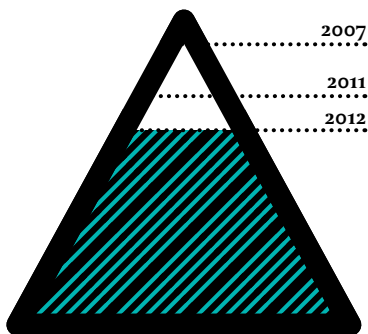

GRID ENERGY CONSUMPTION
DOWN 45.3%
enough to power 70 homes

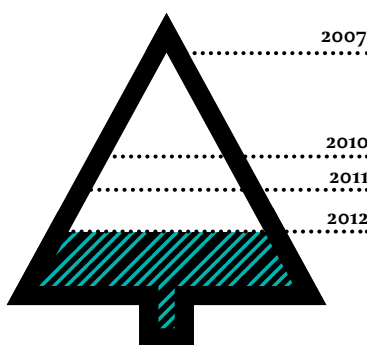

WATER USAGE
DOWN 65.8%
saved 4.2 Olympic pools

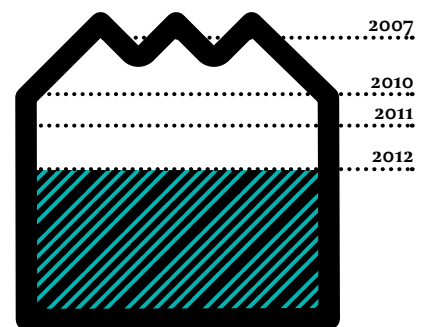

MATERIALS RECYCLED /
ENERGY RECOVERED
UP 32.1%

TIMBER PURCHASE
DOWN 64.6%
saved 18 trees

GREENHOUSE GAS EMISSIONS
DOWN 48.4%
equivalent to taking 126 cars off the road

2012 ACHIEVEMENTS

In 2012, we're proud to report that the Company's environmental footprint shrank even further. Town water consumption (5,411.6 kL) fell a further 28.6% due to a full year of use of our rainwater harvesting system and some heavy rains. Consumption of energy from the grid (424.7 MWh) fell 29.3%, thanks to the sunny days and our photovoltaic array (still the third biggest in Australia) pumping out an impressive

801.5 MWh. Our resulting greenhouse gas emissions (513.9 tCO₂-e – from electricity and gas) fell 27.6%. The push towards greener set construction saw our purchase of timber (31.6m³) drop 44.7% from last year, despite delivering the same number of productions. Our total waste generated decreased by 6.4%, while the amount of recycling and energy capture from our waste increased by 80.1% to 40.8 tonnes.

This year saw our landmark Greening

The Wharf project come to a close, but acknowledgements continued through the year.

STC was awarded the national Visy Environmental Sustainability Award in the ABAF National Business and Arts Partnership Awards, the Water Conservation Award in the Keep Australia Beautiful NSW Sustainable Cities Program, and was shortlisted for an International Green Award.
